## **POPBeamer**

POPBeamer is a useful application for those who use Microsoft Exchange for managing their email messages. It's also a very easy and efficient tool for connecting your POP3 and IMAP protocol accounts with Microsoft Exchange and it can do it all! After a user has provided their Windows XP, or newer versions, details of their email account and the exchange server, the application will prompt them to set up a new account and it will provide them with their POP3 / IMAP credentials, including the following information: The domain name used to route email messages to the exchange server The corresponding server exchange servers they wish to connect to Their domain name The IP address for the exchange server. The DNS root name servers that should be used to connect to the exchange server Their SMTP server information. POPBeamer should be working properly now, so users should be able to access their email account and retrieve their messages. POPBeamer is a powerful and good looking application, so it deserves some time to get used to the interface. Despite the fact that the application will offer to correct the check as soon as it notices any problem, it's a good idea to keep an eye on the status bar. It displays several useful details for the application, including the progress bar, message count, previous and current file name and the warning if there is something wrong with the emails. The application is not only just about changing the messages; it's also about connecting and disconnecting those accounts to Microsoft Exchange server, so those users will be able to manage their accounts as they wish. POPBeamer offers superb potential to connect email addresses with Microsoft Exchange server, so those who use it will be able to bring their message list from anywhere they need. Users have to connect to the exchange server and it will change the message location for them. All the users will get the same message sender, the same sender address and the same email format. POPBeamer does its utmost to provide a clean and effective interface for all people, so people who use it will be able to change the account easily, regardless of their level of experience. Despite the fact that users will be able to customize the way they wish, the application will display any messages it can access. Whenever users will click on an attachment, the application will provide them with a file download prompt. People can check the attachments themselves and even crop the image as

### **What's New In POPBeamer?**

POPBeamer is an application designed to help Windows users, who wish to receive e-mail messages from their POP3 or IMAP email accounts. This application delivers a powerful, GUI-based console utility with which they can manage their accounts and perform multiple incoming email box scans. It provides the user with detailed information about the retrieved messages and they can save the retrieved messages to their files. After doing this, they can retrieve the stored messages anytime. The application can be a powerful tool for retrieval of email messages from your PC, and its synchronization

---

performance is as high as 1,000 mailboxes per second. Key Features of POPBeamer: POPBeamer has diverse and extensive customization options for configuration of accounts and folders, email scanning, real-time logging and data recording. The application has an integrated email protocol implementation and it supports Outlook and Outlook Express protocols. The application allows users to manage thousands of accounts by enabling the creation of thousands of email folders. The application provides a detailed event log viewer which users can use to trace and view the occurring actions of the application. Because the application has a powerful scanning feature, it helps users to get rid of spam and virus mail messages. The real-time logging feature allows users to view detailed information of the application's action in the form of an event log. Users can log messages in plain text or save them to file. The application saves information about the processes which occur during the message search action.
